34) The following graph shows the number of car accidents occurring in one city in each of the   34) _____
years 2006 through 2011 (Year 1 = 2006, Year 2 = 2007 etc). The number of accidents
dropped in 2008 after a new speed limit was imposed. How is the bar graph misleading?
How would you redesign the graph to be less misleading?
Answer: The bar graph is misleading because the vertical axis starts at 60 instead of 0. This
tends to indicate that the number of accidents decreased at a faster rate than they
actually did. The graph would be less misleading if the vertical scale began at 0 or if
a symbol were used to clearly indicate that the vertical scale is truncated and has a
gap.
