#### **CHAPTER STUDY OBJECTIVES**

- 1. Define debits and credits and illustrate how they are used to record transactions. Debit means left and credit means right. The normal balance of an asset is a debit because assets are on the left side of the accounting equation. Assets are increased by debits and decreased by credits. The normal balance of liabilities and owner's capital is a credit because they are on the right side of the accounting equation. Liabilities and owner's capital are increased by credits and decreased by debits. Revenues increase owner's equity and therefore are recorded as credits because credits increase owner's equity. Credits increase revenues and debits decrease revenues. Expenses and drawings decrease owner's equity and therefore are recorded as debits because debits decrease owner's equity. Expenses and drawings are increased by debits and decreased by credits.
- 2. **Explain the recording process and analyze, journalize, and post transactions.** The steps in the recording process are the first three steps in the accounting cycle. These steps are: (a) analyze each transaction for its effect on the accounts, (b) record the transaction in a journal, and (c) transfer the journal information to the correct accounts in the ledger.

A journal: (a) discloses the complete effect of a transaction in one place, (b) provides a chronological record of transactions, (c) helps to prevent and locate errors because the debit and credit amounts for each entry can be easily compared, and (d) explains the transaction and, if there is one, identifies the source document.

The entire group of accounts maintained by a company is called the ledger. The ledger keeps in one place all the information about changes in each of the specific account balances. Posting is the procedure of transferring journal entries to the ledger accounts. After the journal entries have been posted, the ledger will show all of the increases and decreases that have been made to each account.

3. Explain the purpose of a trial balance, and prepare one. A trial balance is a list of the accounts in the ledger and the account balances at a specific time. Its main purpose is to prove that debits and credits are equal after posting. A trial balance uncovers certain types of errors in journalizing and posting, and is useful in preparing financial statements. Preparing a trial balance is the fourth step in the accounting cycle.

## **Exercise 31**

Some of the following errors would cause the debit and credit columns of the trial balance to have unequal totals. For each of the six cases, state whether the error would cause unequal totals in the trial balance. If the error causes unequal totals, indicate the amount of difference between the columns and state whether the debit or credit is larger. Each case is to be

considered independently of the others.

- 1. A payment of \$600 to a creditor was recorded by a debit to Accounts Payable of \$60 and a credit to Cash of \$600.
- 2. A \$480 payment for a printer was recorded by a debit to Computer Equipment of \$48 and a credit to Cash for \$48.
- 3. An account receivable in the amount of \$2,000 was collected in full. The collection was recorded by a credit to Cash for \$2,000 and a credit to Accounts Receivable for \$2,000.
- 4. An owner's drawing was paid by issuing a cheque for \$1,000. The payment was recorded by debiting Salaries Expense \$1,000 and crediting Cash \$1,000.
- 5. A payment of \$600 from a customer on account was received and was credited to cash and debited to accounts receivable.
- 6. A payment of \$450 to a creditor was recorded as a debit to cash and a credit to Accounts Payable.

## Solution Exercise 31 (5 min.)

- 1. The trial balance totals will be unequal. The credit column will be \$540 larger than the debit column.
- 2. The trial balance totals will be incorrect but equal.
- 3. The trial balance totals will be unequal. The credit column will be \$4,000 larger than the debit column.
- 4. The trial balance totals will be incorrect but equal.
- 5. The trial balance totals will be incorrect but equal.
- 6. The trial balance totals will be incorrect but equal.

## **Exercise 32**

Some of the following errors would cause the debit and credit columns of the trial balance to have unequal totals.

- 1. A payment of \$700 to a creditor was recorded by a debit to Accounts Payable of \$70 and a credit to Cash of \$700.
- 2. A \$340 payment for a printer was recorded by a debit to Computer Equipment of \$34 and a credit to Cash for \$34.
- 3. An account receivable in the amount of \$2,000 was collected in full. The collection was recorded by a debit to Cash for \$2,000 and a debit to Accounts Payable for \$2,000.
- 4. An account payable was paid by issuing a cheque for \$800. The payment was recorded by a debit to Accounts Payable \$800 and a credit to Accounts Receivable \$800.

#### Instructions

For each of the four cases, state whether the error would cause unequal totals in the trial balance. If the error causes unequal totals, indicate the amount of difference between the columns and state whether the debit or credit is larger. Each case is to be considered

independently of the others.

## Solution Exercise 32 (5 min.)

- 1. The trial balance totals will be unequal. The credit column will be \$630 larger than the debit column.
- 2. The trial balance totals will be misstated but equal.
- 3. The trial balance totals will be unequal. The debit column will be \$4,000 larger than the credit column.
- 4. The trial balance totals will be misstated but equal.

(A)

8. A cash purchase of supplies for \$700 was journalized and posted as a debit to supplies for \$70 and a credit to cash for \$70.

## Instructions

For each error, indicate (A) whether the trial balance will balance; if the trial balance will not balance, indicate (B) the amount of the difference, and (C) the trial balance column that will have the larger total. Consider each error separately. Use the following form, in which error 1. is given as an example.
